Skill Java Programming — Assignment 4

12. Demonstrate multiple objects.

Java file: MultipleObjects.java

```
class Student {
    int rollNo;
    String name;

    Student(int rollNo, String name) {
        this.rollNo = rollNo;
        this.name = name;
    }

    void display() {
        System.out.println("Roll Number: " + rollNo + ", Name: " + name);
    }
}

public class MultipleObjects {
    public static void main(String[] args) {
        Student student1 = new Student(1, "Asha");
        Student student2 = new Student(2, "Rahul");
        Student student3 = new Student(3, "Meera");

        System.out.println("--- Student Objects ---");
        student1.display();
        student2.display();
        student3.display();
    }
}
```
