Skill Java Programming — Assignment 4

8. Calculate simple interest.

Java file: SimpleInterest.java

```
import java.util.Scanner;

public class SimpleInterest {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        System.out.print("Enter principal amount: ");
        double principal = sc.nextDouble();

        System.out.print("Enter annual interest rate (in percent): ");
        double rate = sc.nextDouble();

        System.out.print("Enter time (in years): ");
        double time = sc.nextDouble();

        double interest = (principal * rate * time) / 100.0;
        System.out.printf("Simple Interest = %.2f%n", interest);
        System.out.printf("Total Amount = %.2f%n", principal + interest);

        sc.close();
    }
}
```
